

- What benefits have you identified from establishing a **linkage** between, for example, Energy Performance Certificates (EPCs), energy audits, logbooks, and Building Renovation Passports (BRPs)?
- How have you addressed the stakeholders of these linkages in your activity?
- What is the impact on **cost and reliability** of information resulting from this interlinking of data/documents?
- What would be needed to make these procedures **effective in practice**?

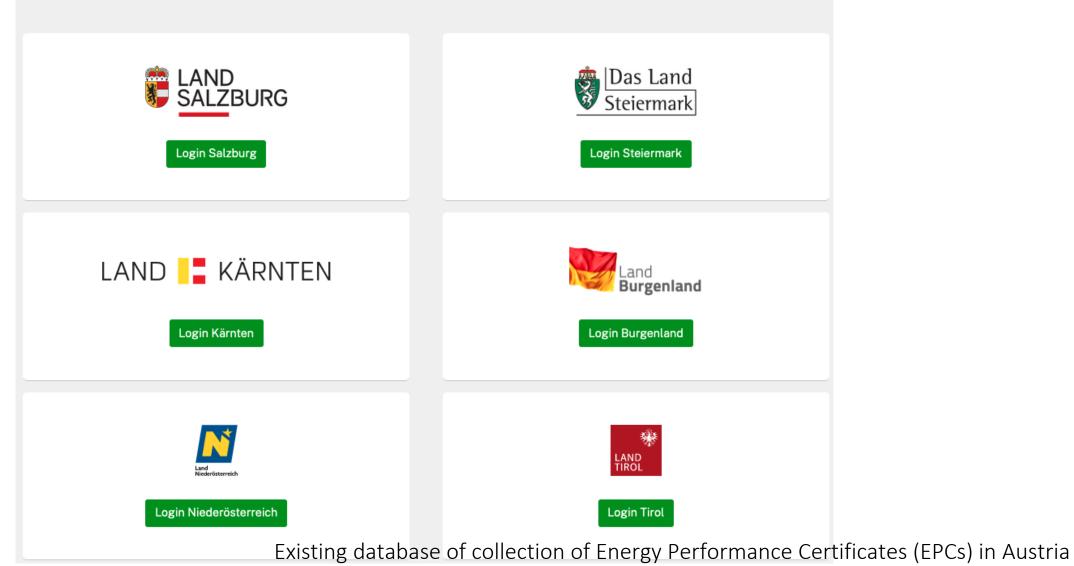

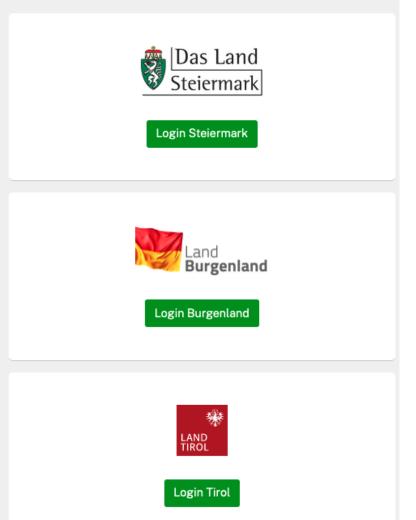

AUSTRIA

ZEUS, Heizungs-Datenbank, Biomasse-Heizwerkdaten

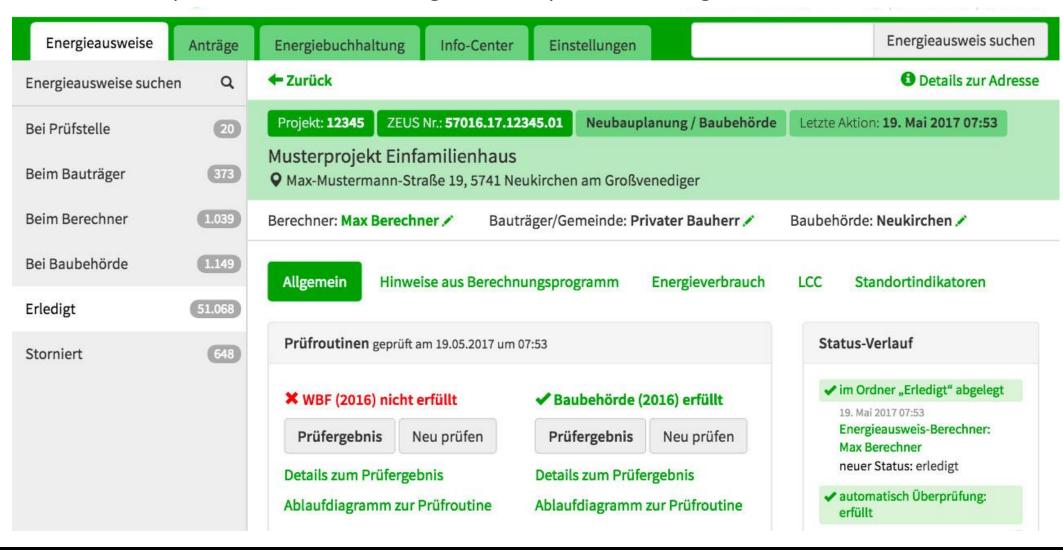

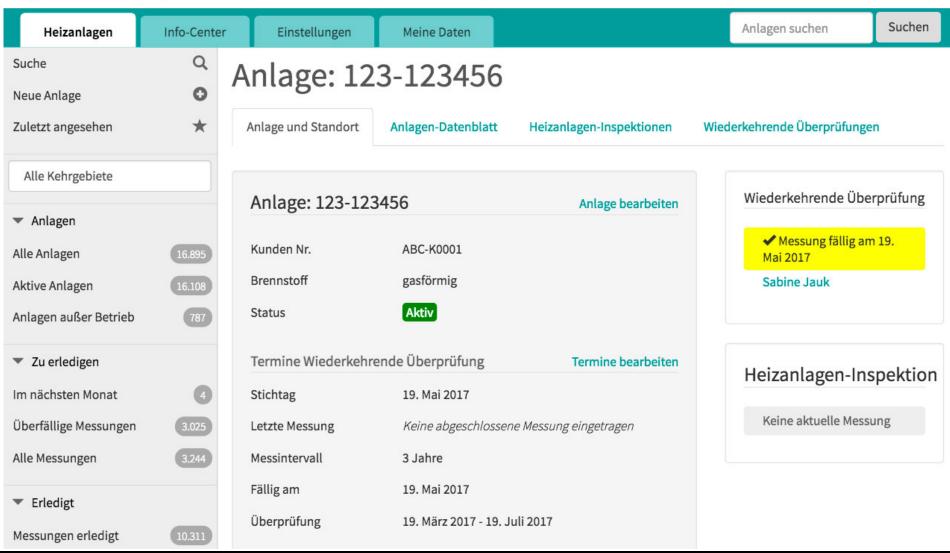

Database for pre-construction drawings and analysis for building authorities of EPCs in Austria

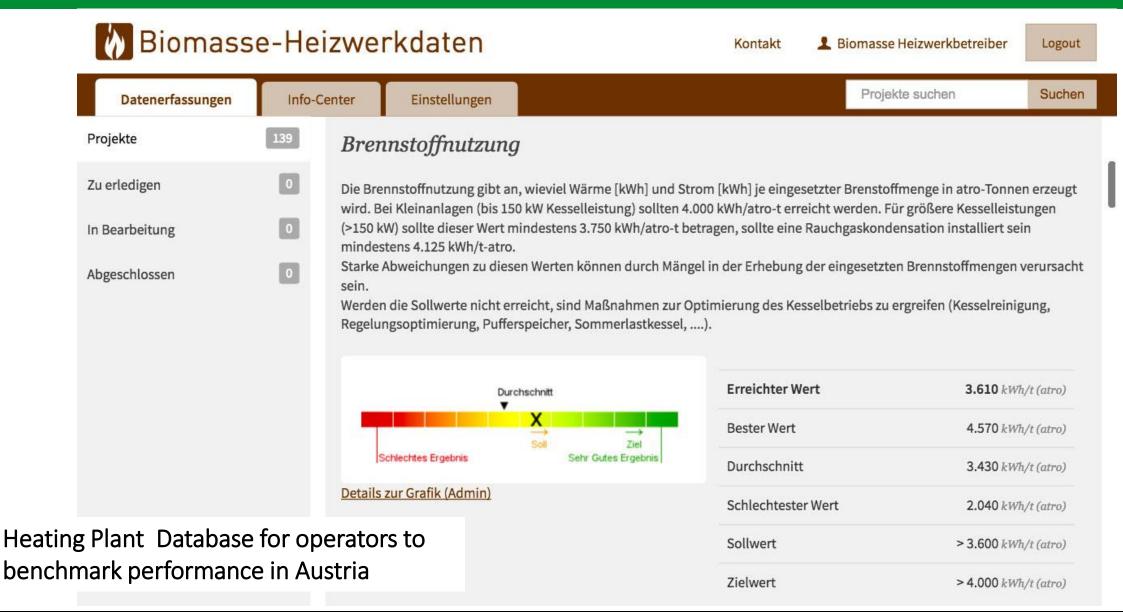

HVAC Database for plumbing engineers and analysis for building authorities in Austria

https://gizmocraft.com/

130 satisfied clients in 15 countries and still not enough

- What if we make use of bulk certificate information for **urban planning** to simulate long-term consumption of energy?
- How can we make existing information on energy and building data **publicly available** considering the data protection regulation act?
- can lessons be learnt from other European countries like Finland, England or Scotland?

ENERGIEZERTIFIKATSGESETZ 2018 (14162 EXEMPLARE)

Energieeffizienzklasse 🕦

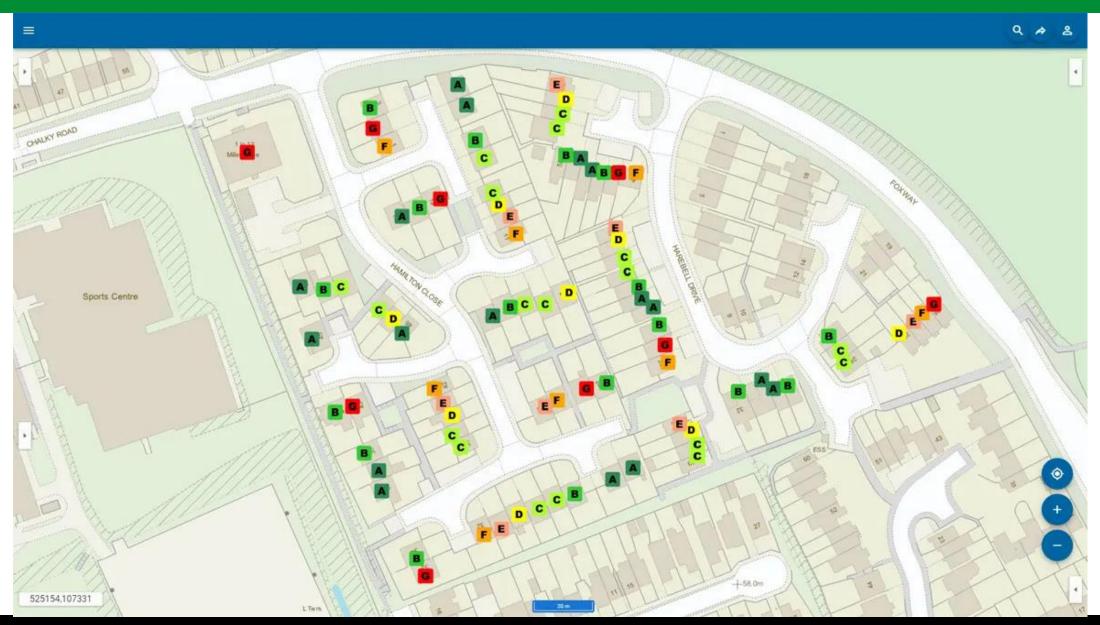

Teile von Heizungsanlagen 🕕		Abschnitte von Lüftungssystemen 🕦	
Fernwärme	44 %	Schwerkraftbelüftungssystem	8 %
Elektrisch	16 %	Mechanisches Absaugsystem	58 %
Holz	0%	Mechanisches Abluftsystem mit Wärmerückgewinnung	0%
Pellet	0%	Mechanisches Zu- und Abluftsystem	1 %
ÖI	1%	Mechanisches Zu- und Abluftsystem mit Wärmerückgewinnung	2 %
Gas	0%	Abluftwärmepumpe (nur Klasse 1 verwenden)	0%
Erdwärmepumpe	8 %	Schwerkraft/mechanische Entfernung	0%
Wasser-Luft-Wärmepumpe	2 %	Schwerkraft/mechanischer Ein- und Ausgang	0%
Abluftwärmepumpe	0%	Anderes Belüftungssystem	30 %
Anderes Heizsystem	29 %		
Nutzung autarker erneuerbarer Energien 🚺			
Solarstrom	1%		
Solarwärme	0%		
Windstrom	0%		
Wärmepumpe	30 %		
Sonstige Energie aus der Umgebung des Gebäudes, Strom	0%		
Andere Energie, die der Umgebung des Gebäudes entnommen wird,	0%		
Wärme

SCOTLAND Heatmap

Example //heatmap.data.gov.scot/

- An international search shows numerous efforts in Europe and worldwide to **visualize Energy Demand** in different ways open sourced or commercially.
- Data is accumulated on a big scale in nearly every country for different reasons.
- A lack of publicly available energy- and building data is severely hindering various actors in pursuing energy transition and climate neutrality.
- Next step: The CityGML 3D Standard seems to be a feasible data interface for pursuing in this matter.
